

Summary

Detailed Oriented Mechanical Engineer with hands on experience in CNC machining and precision engineering within 10 microns tolerance. Experienced in CAD/CAM, proven ability to lead teams, optimize process and deliver high quality.

Experience

CNC Machinist

Apr 2024 - Present

Design Makers

Islamabad Pakistan

- Interpreted engineering drawings and technical requirements to develop precise CAD models and CNC programs.
- Programmed and operated CNC (Turning, Milling and Turn-Mill) with Siemens and Fanuc controls.
- Generate CAM toolpaths using SolidCAM for production readiness.
- Supervised pre-CNC operations carried out by my team, included roughing on conventional machining.
- Lead the complete CNC production workflow, monitored machining quality, and maintained machine accuracy.

CNC Turning Operator

Feb 2023 – Mar 2024

NAVTTTC (National Vocational and Technical Commission)

Islamabad Pakistan

- Operated and programmed CNC Turning on Siemens control.
- Set up and optimized machine parameters, including feeds and tooling.
- Produced precision components and achieved upto 10 microns of tolerance.
- Interpreted engineering drawings, blueprints to meet production requirements.

Locomotive Maintenance and Overhauling – Internship

Aug 2023 – Sep 2024

Pakistan railway central diesel locomotive workshop.

Rawalpindi Pakistan

- Disassembled and reassembled complete diesel-electric locomotive.
- Reconditioning and Maintenance of 12V and 16V cylinder engines.
- Conducted diagnostics and overhauling of compressors, radiators, traction motors and Braking System

Education

National University of Technology

Islamabad, Pakistan

Bachelor in Mechanical Engineering; CGPA: 3.06(In progress 8th Semester)

Nov 2022- July 2026

Skills

- **Software:** AutoCAD, SolidWorks, Solid CAM, Mastercam, Ansys, MS Office
- **Technical:** CNC (Turning, Milling and Turn-Mill), Multi Welding
- **Soft Skills:** Team Leadership & Supervision, Communication & Collaboration, Problem Solving, Adaptability

Projects

Automated Conveyor Belt System

Designed and implemented a conveyor belt system for object counting using ESP32-CAM

Solar Powered Grass Cutter

Eco-friendly, remote-controlled lawn cutter powered by solar energy

Punch and Die Set

Designed and manufactured punch and die set using CNC machines for metal sheet forming

Leveling Jack

Designed and manufactured complete leveling jack using CNC machines

Automated Car Jack using Gear mechanism

Designed a motorized car jack system for efficient load lifting with minimal effort

Automated Streetlights

Designed an automatically turns the lights on and off by detecting ambient lights using LDR

Spot Welding Machine

Fabricated a manual welding system for thin metal sheet joining.

Recommendations

Engr Arif Malik

Managing Director Design Makers Islamabad
